

CHECKMATE FIRE

REAL TIME TECHNOLOGY

ComPROcheck & FiredoorCheck™ software is used at surveying and installation stages to enhance our efficiency and customer satisfaction.

About Checkmate Fire

Checkmate is a specialist passive fire protection installation and survey company, providing professionally managed, cost effective fire compliant services nationally to a wide range of clients.

We operate as two divisions; **Compliance** providing inspection and other consultancy services and **Solutions** for 3rd Party Accredited installations.

Real Time Technology

All Checkmate's fire compartmentation surveys and installation works are recorded electronically using real-time technology, enabling fire compartmentation to be managed and maintained. Project information and photographic evidence is stored in a cloud based portal. The benefits are numerous; information is standardised and customers can log in to monitor progress.

Checkmate are the first company to be registered in all three of BRE's core passive installer schemes; LPS 1531 for installing or applying passive fire protection products, LPS 1271 for installing fire doorsets and LPS 1197 for inspecting, repairing and maintaining fire doorsets.

The BRE Approval process involves a whole series of rigorous checks which are on-going and it is because of this assessment process that the LPCB Approval Mark is recognised worldwide as a badge of quality for Passive Fire Protection Installation.

Hospital Case Study

WARRINGTON & HALTON HOSPITALS NHS FOUNDATION TRUST

As a part of their on-going commitment to maintain high standards of fire safety, Warrington and Halton Hospitals NHS Foundation Trust recently appointed Checkmate to carry out an inspection of fire walls and fire doors and to undertake any required upgrades to fire stopping across the Halton Hospital site.

Checkmate's site management team worked closely with hospital staff at all levels to ensure that the project was completed with no disruption to the normal operation of the hospital.

"Checkmate have worked for the Trust for a number of years and we find them very professional, competent and user friendly. With their real-time technology they supply us with a complete, cost-effective survey and installation package, which greatly helps us to retain fire compliance".

Lee Bushell, Estates Capital Projects, Warrington & Halton Hospitals NHS Foundation Trust

FDIS Trained Fire Door Inspectors

Clive Reilly, Compliance Manager at Checkmate Fire Solutions has become the first person to meet the stringent requirements of the Fire Door Inspection Scheme (FDIS) and become a Certificated Inspector.
